

Information Security as a Business Strategy

HOW VULNERABLE ARE YOU?

Networks, computers and applications are a source of operational and infrastructure vulnerabilities. In the wrong hands, “soft spots” can be exploited, leading to unauthorized access, exposure of sensitive data, disruption of services, or failure to comply with regulatory requirements.

And yet, information security remains an afterthought for most companies. Single-point solutions, applied without broad consideration of the overall business impact, are common. And such “solutions” are often implemented out of fear, or mandated compliance to a growing number of regulations, or as a reactive response to attacks, rather than as a comprehensive risk management strategy.

Sensiba San Filippo (SSF) Security Solutions™ combines people, processes and technology to form an effective and comprehensive security environment. Through vulnerability discovery, risk reduction and security implementation, we ensure the protection of your company’s mission critical assets. Through our in-depth understanding of your business and asset priorities, we are able to help you select and integrate the most appropriate security solutions for your specific environment.

SSF Security Solutions’ flexible and value-added services revolve around the following key areas:

Assessments

Establish baselines and measurement parameters, determine vulnerabilities and current level of risk. Solutions include:

- Internal Controls Assessment
- Legal & Regulatory Compliance Audit
 - ✓ PCI DSS Compliance Preparation
 - ✓ FTC ‘Red Flag’ Rules Compliance Preparation
- IT Vulnerability Assessment

Strategy & Policy

Align current security and business needs while laying groundwork for future growth. Solutions include:

- Security Strategy Development
- Security Policy Development
- Change Management
- Disaster Recovery Planning

Architecture & Implementation

Design and integration of complex systems; selection of optimal products. Solutions include:

- Security Architecture & Design
- Identity Management & Access Control
- ISO 27001/27002 Compliance Preparation
- Security Awareness Training
- SAS-70 Control Objective Consulting

Managed Security Services

Proactively manage security and network systems to confront increasing threats. Solutions include:

- Vulnerability Management Program
- Business Continuity (Monitoring & Backup Solutions)
- Disaster Recovery (Failover & Recovery Solutions)
- Managed Firewalls, IDS, Antivirus, and VPN

SSF SECURITY SOLUTIONS™ YIELDS BENEFITS

Implementing SSF Security Solutions provides both direct and indirect benefits, including:

- **Cost Reduction** – When information security is considered in the early stages of an implementation project and not as an afterthought, inevitable security-related changes and compensating IT projects are minimized, reducing overall project cost.
- **Business Opportunity** – Having an established Information Security program demonstrates due diligence to protect customer data. Resulting customer confidence in your organization can provide a clear competitive advantage.
- **High Availability of Systems** – Downtime equals loss of revenue for most companies. Implementing a high-availability strategy will save money over time as costly system failures are avoided.
- **Legal & Regulatory Compliance** – Increasing compliance-related legislation is being passed requiring companies to improve their internal controls and tighten their information security posture. Having a defined and mature security program in place ensures that your company will stay ahead of the legal, regulatory and competitive curve.

A COMPLETE ENTERPRISE SECURITY SOLUTION

SSF Security Solutions' complete end-to-end security solutions cover the spectrum of security needs from physical security to logical access control. We are experts in securing networks through to applications, and ensuring data recovery and business continuity.

SSF Security Solutions provides IT infrastructure and security-related services that meets the needs of your particular business and environment. Our team of experienced security experts can help you evaluate the effectiveness of your current security program, reduce risk and manage information security as a business strategy.
